aircraft for data link application. All these antennas are operated on different frequency bands, so care should be taken that to avoid the interference of radiation pattern of all these antennas. Also when these antennas are placed on the aircraft body, its radiation pattern gets distorted, so one should design an antenna such that it will meet our application. 3. The receiving properties of antennas are characterized by the antenna effective area $A_e(f, T, I)$, where the available power at the output of the receiving antenna $P_r(f)$ is the product of the effective area of the receiving antenna in direction T, I and the flux density S ($\text{W m}^{-2} \text{ Hz}^{-1}$)

fixed, the antenna should radiate equally in all directions, and this is known as an omni-directional antenna. Gain is not a quantity which can be defined in terms of a physical quantity such as the Watt or the Ohm, but it is a dimensionless ratio. Gain is given in reference to a standard antenna. The two most common reference antennas are the isotropic antenna and the resonant half-wave 9 64 ...
