The study of random heterogeneous materials is an exciting and rapidly growing multidisciplinary endeavor. This field demands a unified rigorous means of characterizing the microstructures and macroscopic properties of the widely diverse types of heterogeneous materials that abound in nature and synthetic products.

### **Random Heterogeneous Materials: Microstructure and**

The micromechanics of random structure heterogeneous materials is a multidisciplinary research area that has experienced a revolutionary renaissance at the overlap of various branches of materials science, mechanical engineering, applied mathematics, technical physics, geophysics, and biology.

### **Random Heterogeneous Materials : Microstructure and**

This paper presents a microstructure-guided modeling approach to predict the effective elastic response of heterogeneous materials, and demonstrates its application toward two highly heterogeneous, unconventional structural binders, i.e., iron carbonate and fly ash geopolymer.

Part I deals with the quantitative characterization of the microstructure of heterogeneous via theoretical methods; Part II treats a wide variety of effective properties of heterogeneous materials and how they are linked to the microstructure, accomplished by using rigorous methods.
